

Interstate 75:

Florida Department of Transportation Interstate 75 Ultra Asset Maintenance

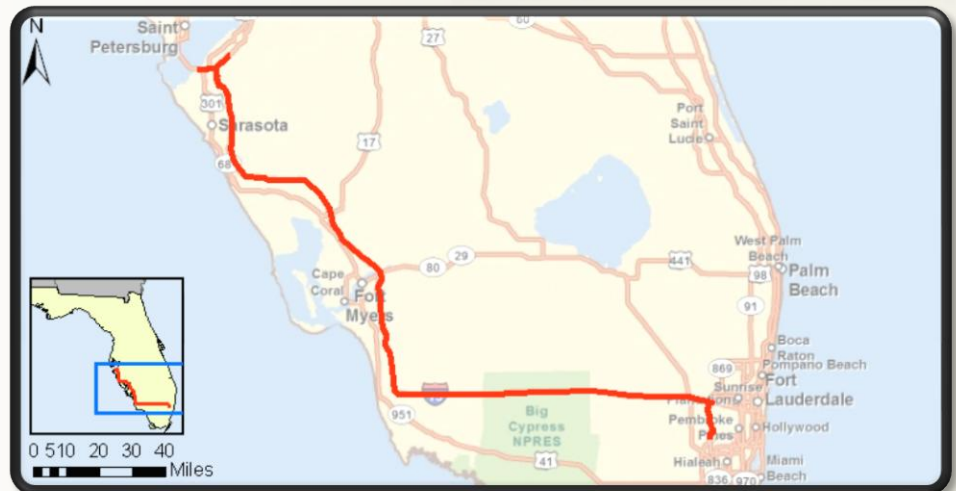

DBi Services provides comprehensive management, operations and asset maintenance of all roadway, roadside, structures, rest areas, recreational areas and weigh stations along one of the most transited expressways in Florida, Interstate 75. More than eighty thousand (80,000) vehicles travel sections of this Ultra Asset Maintenance project on a daily basis.

This is the largest asset maintenance project of its type in the United States, covering two (2) FDOT Maintenance Districts and consisting of approximately two hundred fifty-four (254) centerline miles from the Hillsborough/Manatee County line to the Broward/Miami-Dade County line, across Alligator Alley. Also included in this project is a short section of Interstate 275 from the Sunshine Skyway Bridge south to Interstate 75, as well as portions of State Routes 84, 681 and 876.

This unique project also includes the maintenance, management and operation of eight (8) rest areas, two (2) weigh stations and several roadside recreation areas and toll facilities within Alligator Alley. In addition, inspection and maintenance of bridges, overhead sign structures and high mast light structures are also included in this project.

Project Highlights

- **DBi Services** is responsible for accident and emergency response throughout the project corridor, including the implementation of one-way traffic on Alligator Alley to allow for a more efficient evacuation of south Florida in the event of hurricane or other emergency.
- A unique fence system prevents animals such as alligators from entering the roadway and presenting a hazard to the traveling public. In addition, the fence is equipped with an intrusion detection system that identifies when a vehicle impacts the fence and alerts emergency response personnel allowing for swift response to accidents along the sparsely populated section through the Everglades.
- **DBi Services'** facility management staff are responsible for the cleaning and maintenance of rest areas, weigh stations and recreational areas throughout the project, including environmental permitting, maintenance and management of water and wastewater treatment plants for the Broward and Collier Rest Areas. This requires **DBi Services** to conduct periodic chemical and biological analyses to comply with The Safe Drinking Water Act and Florida Department of Environmental Protection requirements.
- Seven (7) contract with one (1) seven (7) year renewal.
