

INTERSTATE 75 - FLORIDA

Florida Department of Transportation District 7 State Highway Maintenance

DBi Services has provided performance-based asset maintenance services for FDOT District along Interstate 75 in Hillsborough, Pasco and Hernando Counties since April 2014. The project is a seven-year contract that runs through 2021.

This project consists of comprehensive asset maintenance of 71 centerline miles and 400 lane miles of limited access interstate and more than 20 miles of frontage roads, as well as operations and maintenance of four rest areas which include water and wastewater facilities.

DBi Services maintains the four project rest areas through a partnership with RESPECT of Florida, who provide employment opportunities for Floridians with disabilities.

Project Highlights

The project corridor serves as a major transportation route through the urban area of Tampa, as well as for travelers accessing the Gulf Coast beaches. This is also the primary access for sports fans traveling to see the Tampa Bay Buccaneers, Rays, Lightning and New York Yankees Spring Training.

DBi Services self-performs 90% of the work on this contract including mowing and guardrail. This allows us to have more control over the quality of work performed and gives us the flexibility to respond immediately should the need arise.

DBi Services is responsible for 24/7/365 accident and emergency response throughout the project corridor including coordination of resources working with the FDOT traffic control centers, as well as all police agencies and Traffic Incident Management Systems (TIMS).

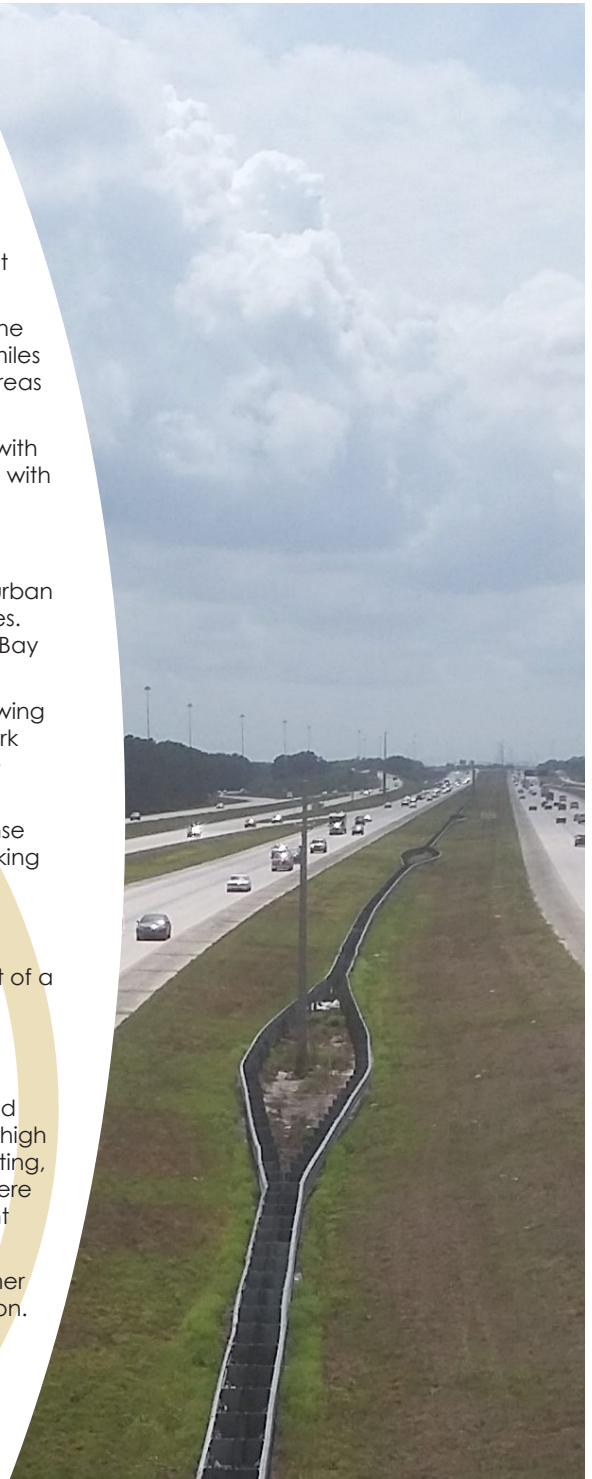

In addition, DBi Services is responsible for planning, coordination and implementation of One-Way Evacuation Operations for I-75 in the event of a hurricane or other catastrophic event.

Relevant Experience Gained

- District 7 has included enhanced Quality Assurance and Quality Control (QA/QC) plan requirements for the project. These enhanced requirements, now becoming the norm throughout the state, have high standards set for conformance levels on such items as highway lighting, incident response, maintenance of traffic and customer service. There are also enhanced QC inspection requirements to ensure consistent sampling and results across the project.
- District 7 included enhanced performance requirements for customer service, vegetation management, lighting and stormwater mitigation.
- DBi Services has implemented the new asset maintenance QA/QC plan, having fully automated the process in our Maintenance Management System (MMS). Additionally, District 7 has access into the system to see live time results of the QC/QA process.

Value to Customer

- Bundled operations and maintenance minimizing the number of contractors and oversight needed.
- A high level of QA/QC experience based on the enhanced requirements for this project.
- In-house services, such as mowing, allow direct control of costs and quality.
